## About Uranium Equities

Uranium Equities Limited (UEQ) is positioned for growth in the uranium sector through its three pronged approach: The development of the PhosEnergy Process; A strategic Investment in Energia Minerals Limited in the Carnarvon Basin; and Exploration activities directed at high quality exploration assets in Australia's premier uranium districts.

The PhosEnergy Process is an innovative patented process for the extraction of uranium as a by-product from phosphate in the production of phosphate based fertilisers.

The global annual production potential of uranium from the phosphate industry is in the order of 20 Mlbs  $U_3O_8$ . This quantity of uranium is mined in phosphate ores but not recovered annually on a worldwide basis. The major phosphate based fertiliser producers are located in Northern Africa, North America and Asia.

The PhosEnergy Process has been proven to demonstration plant scale with results establishing a robust process capable of achieving high levels of uranium recovery at the lower end of the cost curve. A PFS level engineering study is underway and due for completion in January 2013.

Energia Minerals are developing the Carley Bore Deposit in Western Australia's Carnarvon Basin. UEQ believes that the Carnarvon Basin will be Australia's next ISR production centre and Energia are well positioned to move Carley Bore quickly into development.

The Nabarlek Project provides a rare near mine exploration opportunity surrounding the historic Nabarlek Uranium Deposit (previous production: 24 Mlbs @ 1.84%  $U_3O_8$ ). The deposit lies within an extensive uranium mineral system which extends over more than 50 square kilometres within the Mineral Lease and the surrounding tenements. The mineral system which contains widespread anomalous uranium geochemistry and ore grade mineralisation at several locations remains largely untested.
